

GOBBLE PLUS

Evacuation System Cleaner

- Optimum enzymatic + cleaning activity
- Works continuously between uses
- Contains **NO** harsh or hazardous chemicals, NPE free
- Non foaming, amalgam separator friendly
- Will not harm plastics, metals or carbon filters, or the environment
- Fresh clean scent at the solids traps + throughout the system
- Mild formulation 7 ± 1 pH

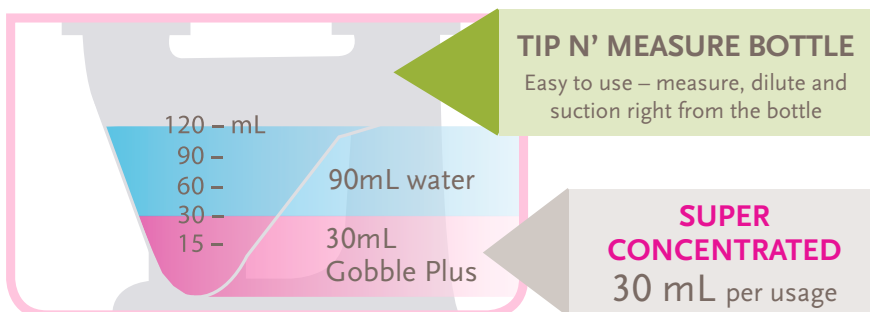

Gobble harnesses nature in a safe, effective process resulting in high suction, clean and deodorized evacuation lines.

Clogged evacuation lines = poor suction, harmful bacteria, and offensive odour. Avoid cross-contamination and costly, inconvenient delays with Gobble Plus

- A synergistic blend of 3 Bacillus microorganisms + super charged cleaning agents.
- Environmentally friendly enzyme-creating bacteria attack and dissolve organic waste and other residue in your evacuation system reducing them to harmless natural elements.
- Gobble Plus produces a completely benign biofilm that continually cleans and deodorizes suction lines between treatments.
- The result: a clean, free-flowing and deodorized evacuation system.

DAILY TREATMENT

HOW GOBBLE WORKS

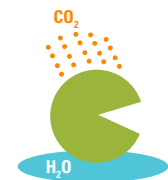

Friendly bacteria emit enzymes.

Enzymes liquify solid organic waste.

Friendly bacteria absorb liquified organic waste.

After absorbing liquified waste, friendly bacteria give off harmless carbon dioxide and water by products.

Bacteria multiply and continue this process until all solid organic waste is eliminated.
