Its Effective	A highly effective, broad spectrum antiseptic agent.
	Virobex-P is antimicrobial and washing with an antimicrobial handwash reduces the skin microbial flora.
	Effective against Gram negative and Gram positive bacteria, fungi (yeast and molds) and some viruses. Reduces the skin microbial flora.
	Virobex-P will keep hands germ-free, even inside gloves.
It Keeps Working	Washing with a PCMX handwash such as Virobex-P not only reduces the microbial flora but continues to provide protection and prevent regrowth of bacteria.
	This residual effect is especially important with glove use. Guidelines recommend washing hands prior to glove donning, however the glove environment is conducive to bacteria growth.
	Efficacy increases with continued use.
