Remineralizing Solution with Fluoride

- Remineralizing and anti-cavity fluoride rinse
- Multiple-ion formula has all the elements needed for remineralization of decalcified teeth
- Contains all the naturally occurring mineral ions found in healthy tooth enamel and dentin
- Hardens tooth enamel by removing acids and increases the rate of clearance of cariogenic material from the mouth
- 0.02% Sodium fluoride
- Use as part of a daily hygiene routine

For office and
home use

Made in Canada

FLAVOUR

Soft Mint

500 mL

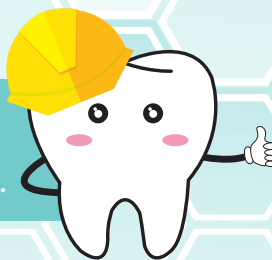

50 mL

Swish 10–15 mL for
1 minute twice daily

20mL
15mL
10mL
5mL

Contains calcium, sodium, fluoride, phosphate and magnesium which form hydroxyapatite and fluorapatite on teeth enamel, reducing demineralization and helping promote remineralization.

Replaces calcium and phosphate ions thus making it ideal as a preventative and corrective treatment

Clinical Uses:

Adult root caries and early caries, particularly interproximally
High acidic/sugar consumption
Xerostomia
Orthodontics

Decalcified surfaces
Post tooth whitening
Cancer patients
Bulimia
GERD reflux
Acid Intolerance
Geriatrics
