

Topical Anesthetic Gel 18% Benzocaine and 2% Tetracaine

- Rapid and long-lasting anesthesia
- Contains 18% benzocaine and 2% tetracaine
- Effective in 30 seconds for up to 10–15 minutes
- Ideal for use with rubber dam placement
- Requires only 0.2 mL of gel to be applied to mucosal tissue
- Unique one touch dispenser

made in Canada

Effective	Minimizes the pain and discomfort in oral mucosal tissue arising from needle punctures, deep scaling procedures, prosthetic adjustments, clamp or crown placement, removal of primary teeth and suture removal. When patients are comfortable and pain-free they are more likely to comply with treatment and feel less anxiety.
No-gagging	Zap can be used to reduce the pharyngeal (gag) reflect associated with placing dental materials like impression trays, dental dams and x-ray film into the oral cavity.
Convenient	Unique one touch eliminates the changes of cross-contamination and dispenses the right amount of gel each time, reducing waste. The frosted dispenser shows you how much product is left in the jar so you can re-order efficiently.
Fast-acting	The synergy of benzocaine and tetracaine results in a fast topical anesthesia within 15 seconds, providing quick relief from pain and discomfort. This allows dental procedures to be initiated promptly, thereby improving efficiency, and reducing patient wait times.
Long-Lasting	The combination of benzocaine and tetracaine also provides a long lasting anesthetic. Providing topical anesthesia for a minimum of 10-15 minutes.*
Great Taste	Two great flavour options eliminate any bitter aftertaste.

 Strawberry Ice

 50 g

Topical Anesthetic Gel 18% Benzocaine and 2% Tetracaine

ZAP is ideal for:

GENERAL

- Pre-injection anesthetic
- Gag reflex from impressions, X-rays
- Alleviate apprehension
- Retraction cord placement
- Clamp placement

ORAL SURGERY

- Pre-injection anesthetic
- Dry socket
- Suture removal

PROSTHODONTICS

- Denture discomfort
- Minimize gag reflex for more accurate impressions

ORTHODONTICS

- Minor mouth irritation
- Banding a molar
- Minimize gag reflex for more accurate impressions
- Arch bar removal

ENDODONTICS

- Pre-injection anesthetic
- Lubricant with rubber dams
- On file or reamer as a lubricant and anesthetic to help eliminate the pain of intrapulpal injection

PERIODONTICS

- Pre-injection anesthetic
- Localized gingival curettage
- Deep scaling
- Suture removal
- Post-op discomfort

PAEDODONTICS

- Pre-injection anesthetic
- Removal of mobile deciduous teeth
